

## Cometech Testing Machines Co., Ltd.

COMETECH professionally manufactures quality control equipments in Taiwan. Cometech offers material testing equipments including universal testing machines and digital force testers for tensile, compression, flexural, torsion and fatigue testing. Quality control instruments are our main products including material testing machine, impact testing machine, abrasion tester, torque tester, drop tester, friction tester, force tester, adhesion tester and testing accessories such as grip and extensometer. Our testing machines are applied for many kinds of materials including high polymer material, metal material, fabric, textile, tape, viscose, paper, electronic material, rubber & plastic, etc. Not only raw materials test but also components and finished products testing are applied to our universal testing machines. Mechanical material testing machine is to measure the physical property of material. In accordance with the material nature and test demand, we manufacture a wide range of grip and fixture to accord with various test standard such as ASTM, JIS, ISO standard. Welcome ! **Environmental and temperature testing equipment** products are described below. More information about **Environmental and temperature testing equipment** products will be frequently updated in this category.

### Categories > Environmental and temperature testing equipment

#### QC-605 ( Oven )

Oven is suitable for usage of drying/ baking/ pre-heating all kinds of material/ specimen/ finished products within temperature under 200 . The heating system of this testing chamber is heating-recycle system. Maintain homogeneity temperature inside the whole chamber. With thermo-protector to prevent dangerous occurred from over-heating caused by damage of Temperature-Control unit/ parts. Oven provides high temperature to dry and heat the materials. This environmental tester equipment have a electric heat apparatus for heating air and force circulation to well mix the temperature in the chamber, also including the timing control function for controlling the using time, and double protection for over heat for used safety. Cometech provides various laboratory instruments for your reference in Taiwan. Click view more pictures for more other related testing machines.

#### QC-703 ( Freezing Chamber )

Freezing Chamber imitates various temperature environments for products and materials reservation, and test the reaction of material to temperature. This environmental testing equipment uses high precision microcomputer touching sense temperature controller. This testing equipment is able to create various temperature environments - low temperature and high temperature separately. Therefore the testing instrument is most suitable for food and medicine storage. Also can test the reaction of material to temperature. Cometech provides various laboratory instruments for your reference in Taiwan

#### QC-711M ( Salt Water Spray Chamber )

Salt Water Spray Chamber is for testing the rust resistance grade of surface treatment of electro-plating, paint coating and anodizing. This environmental testing machine Salt Spray Tester is used for testing rust-proof treatment of material, such as metal surface that after painting, coating, electroplating, anodizing, films of organic and non-organic... etc. It's a corrosion and Rust-Resistant test. The Material Test Equipment is for checking the corrosion-resistant of products (specimen) under long time corrosion after treatment like anodizing, rustproof oiling, chemical, etc. Cometech provides various laboratory instruments for your reference in Taiwan. Click view more pictures for more other related testing machines.

## Cometech Testing Machines Co., Ltd.

COMETECH professionally manufactures quality control equipments in Taiwan. Cometech offers material testing equipments including universal testing machines and digital force testers for tensile, compression, flexural, torsion and fatigue testing. QC-605

### Categories > Environmental and temperature testing equipment

This is the description about **QC-605, Oven**. The description includes model, name, description and specification for **QC-605, Oven**. Related Keywords : Oven

**Product Name:** Oven

**Description:** Oven is suitable for usage of drying/ baking/ pre-heating all kinds of material/ specimen/ finished products within temperature under 200 . The heating system of this testing chamber is heating-recycle system. Maintain homogeneity temperature inside the whole chamber. With thermo-protector to prevent dangerous occurred from over-heating caused by damage of Temperature-Control unit/ parts. Oven provides high temperature to dry and heat the materials. This environmental tester equipment have a electric heat apparatus for heating air and force circulation to well mix the temperature in the chamber, also including the timing control function for controlling the using time, and double protection for over heat for used safety. Cometech provides various laboratory instruments for your reference in Taiwan. Click view more pictures for more other related testing machines.

**Features:**

**Specification:** Temperature : Room+40~260  
graduation : 0.1  
Inner Size : 50 x 50 x 60 (H) cm  
Machine Dimension : 100 x 70 x 115(h)cm  
Weight : 90kg

**Safety Approval:**

#### Features:

**Specification:** Specimen Placement:15°or30°  
Internal Dim. W x H x D (cm): 60 x 40 x 45 or specified  
Material:  
made of P.V.C. sheet, its internal structure uses advance technical of stainless steel pipe. The feature is well-reinforced, temperature well kept, and deformed free and keep temperature stable.
